THE LOCKING SYSTEM

An ingenious invention: the rolling element

You can turn and rotate it at will: at DOM, we are constantly developing our products, in order to continue to ensure maximum security in the future. Imagine a reversible key system in which practically every copying attempt will fail. A reversible key system that not only has the proven DOM security features, but is also equipped with a new development: a floating roller in the key.

This design, including the active mechanical elements, is patented up until 2020, and makes copying the key virtually impossible.

Reasons for the DOM ix 6 SR system

- Maximum security
- Increased drilling protection
- Maximum copying protection
- Electronics compatible
- Replacement keys only with Registration Card
- Patent until 2020
- High-quality material
- Standard and modular construction

THE SECURITY FEATURES

Intelligent protection

Experience a user-friendly protection system in which you can have complete confidence: because the ix 6 SR system protects not only against unauthorized copying, but also against the application of mechanical force.

The cylinder is available in both solid and modular design.

Fig.: Components of the modular system

	ix 6 SR
Technical details	
Axially-sprung and movable locking bar technology	•
10 sectionally graded core and housing pins	•
Nickel silver reversible key, corrosion-free, with roller 45° floating	•
Standard security units	
Scanning, unbarring and picking protection	•
Drilling protection class II	•
Pulling protection	•
2-fold percussion protection pins	•
Profile types	

THE COMFORT FEATURES

Complete, comfortable, compatible

Locking from both sides

All DOM reversible key systems in version T lock from both sides. The door can also be opened from one side if the key is in the keyhole on the other side.

Electronics compatible

The combination of mechanical and electronic features is completely unproblematic: simply mount a ClipTac (the electronic transponder unit) on the reversing key. This will allow you to actuate both your mechanical cylinder and any existing electronic DOM products.

DOM Safety circuit

In addition to the high-quality control and the manufacturer's warranty, the Registration Card is also a part of the DOM safety circuit. Only the Registration Card authorizes you to copy the original DOM keys.

Cylinder available in special colours

Suiting to the fitting: The cylinders of the ix range are available as a standard in matt nickel-plated but also in special colours: bright chrome plated, matt brushed brass, polished brass or gold coated.

Modular construction

The ix cylinders are suitable for all purposes owing to their modular construction – system M. The positive-action connection of the chromium-nickel-steel ribs ensures increased tensile strength. At the same time the system of locking mechanisms offers the following advantages:

- Doors which could not yet be measured out, can be retrofitted easily later on by means of the system M.
- Later changes (e.g. due to relocation) can be carried out easily by means of modular cylinder extensions.
