TROLLEY MANAGEMENT SYSTEMS

Organisations such as airports, supermarkets and other retailers are often faced with the expensive task of retrieving abandoned trolleys. According to many local authority and environmental policies it is often the responsibility of the owner to retrieve and correctly dispose of any discarded trolleys, an expensive and time consuming activity which can be avoided.

TROLLEY MANAGEMENT SYSTEMS

A RONIS trolley management system offers an effective solution to the problems caused by abandoned and vandalised trolleys. The range of RONIS trolley locks has been designed with the requirements of the customer in mind and significantly improves the safe storage and management of trolleys for a range of different applications.

THE CONCEPT
The implementation of a RONIS trolley management system will encourage the customer to return their trolley to the correct trolley park in order to retrieve their coin.

THE BENEFITS

- Significantly reduces expensive retrieval costs
- Improves the general external appearance of a building
- Avoids local authority penalties
- Promotes a pro-active approach to current environmental issues
- Improves public perception of an organisation
- Reduces excessive trolley damage and high replacement costs
- Increases customer loyalty
- Lowers maintenance costs
- A range of **RONIS**[®] tokens are also available for distribution in store
